

About Citicus Limited

Our business mission

Citicus™ Limited was formed in 2000 to develop and sell **world-class automated risk and compliance management tools**, plus supporting services.

Our award-winning, flagship product is **Citicus ONE**. This automates **FIRM** - a ground-breaking methodology for managing **information risk** developed by the founders of Citicus for and in conjunction with the Information Security Forum (ISF).

Citicus ONE Release 3 applies the same principles to other key areas of risk, including **privacy, supplier risk, and site risk**. It can be easily configured to measure and manage other areas of operational risk.

Because the same principles are employed, information about multiple areas of risk can be aggregated for presentation to decision-makers.

Our customers and way of working

Our customers are leading organisations, active across a broad spectrum of activities as illustrated below.

Main activity	Where based
Government	Canada, Ireland, UK
Banking	UK, USA, Saudi Arabia, Africa
Insurance	Europe, USA
Energy, water	UK, Germany
Telecommunications	UK, Eastern Europe, Africa
Consumer products	Switzerland, UK, USA
Electronics	Japan, Scandinavia
Forestry	Scandinavia, Portugal

Many of these have large-scale implementations, using **Citicus ONE** to measure and manage the risk posed by many thousands of 'targets of evaluation', including compliance with required practice.

Citicus ONE emerged from a collaborative development with key customers. Collaboration continues through an active user group whose current focus is managing issues/actions, incident reporting, workflow, integration with other systems, and enhancing **Citicus ONE's** Harm reference tables.

What we offer

Licensed software: **Citicus ONE** is a web-based application that can be installed on an in-house server connected to your corporate Intranet. For small-scale use, it can also be installed on a laptop.

Hosted services: you can take advantage of our hosting services to help you implement our software without having to arrange its installation on an in-house server. Hosting options include **regular** and **premium** hosted services.

Training: we can provide training for individual customers on-site or through public training courses.

Expert guidance: we can advise you on every aspect of deploying our software and on using it to manage risk across your enterprise.

By working with our **Implementation Partners**, we can support implementations of all sizes, extending across the world.

Awards

Citicus ONE received the **SC Magazine Editor's Award** in 2003. SC Magazine Awards are the most prestigious in the information security industry. The award citation said:

Citicus ONE's function is to help company managements focus their efforts and investments where they will be most effective, and where they can drive down risk. In this respect, we felt, it tackles one of the most fundamental challenges of the information security profession today, which is to prove a return on investment."

Citicus ONE received the **IDG Network Application Product of the Year Award** in 2004. The award citation said:

"We felt this is a product that brings risk management out of the stratosphere and into the real world for the average business. What particularly impressed us is the sheer usefulness and readability of the system output; it's cleverly laid out, and the graphing systems give excellent overview information."

Management team

Citicus Limited is run hands-on by its founders:

Simon Oxley is managing director. Before joining Citicus, he contributed to many ISF projects and led ones on e-commerce, cryptography, web security, security architecture and active content. Before that, he managed information security for National Power and Reuters and helped set up one of the UK government's first computer security evaluation facilities. He served on the ISF's Council 1992-94.

Marco Kapp oversees the design of **Citicus ONE**. He was chief architect of the **FIRM** methodology, and led or contributed to many other ISF projects involving analysis of risk. As a director of Coopers & Lybrand's UK consulting practice, he established the ISF in 1990, and directed its first year of operation.

Sian Alcock oversees **Citicus ONE's** development. Before joining Citicus, she spent three years developing, and analysing the results of the ISF's information security status survey - the world's most comprehensive survey of the controls applied by leading organisations to their mission-critical systems and their experience of incidents.
